

Task: Java Comparator

```
import java.util.*;

class Checker implements Comparator<Player> {

    public int compare(Player a, Player b) {

        if (a.score != b.score) {

            return b.score - a.score; // decreasing score

        }

        return a.name.compareTo(b.name); // alphabetical name

    }

}

class Player{

    String name;

    int score;

    Player(String name, int score){

        this.name = name;

        this.score = score;

    }

}

class Solution {

    public static void main(String[] args) {

        Scanner scan = new Scanner(System.in);

        int n = scan.nextInt();

        Player[] player = new Player[n];

        Checker checker = new Checker();

        for(int i = 0; i < n; i++){

            player[i] = new Player(scan.next(), scan.nextInt());

        }

        scan.close();

        Arrays.sort(player, checker);

        for(int i = 0; i < player.length; i++){

            System.out.printf("%s %s\n", player[i].name, player[i].score);

        }

    }

}
```
