

Functional Programming using filter():

1.Remove Element

```
class Solution {  
    public int removeElement(int[] nums, int val) {  
        int k = 0;  
        for (int i = 0; i < nums.length; i++) {  
            if (nums[i] != val) {  
                nums[k] = nums[i];  
                k++;  
            }  
        }  
        return k;  
    }  
}
```

2. Remove Duplicates from Sorted Array

```
class Solution {  
    public int removeDuplicates(int[] nums) {  
        int k = 1;  
        for (int i = 1; i < nums.length; i++) {  
            if (nums[i] != nums[i - 1]) {  
                nums[k] = nums[i];  
                k++;  
            }  
        }  
        return k;  
    }  
}
```
